**Desktop Ultrasonic Humidifier**  
**HUM-35-45-A**

## Before Using Your New Humidifier

The Alaskan Ultrasonic Humidifier from InStyle Products Limited makes use of the ultrasonic high frequency vibration theory to transform water into 1-5 micron particles. Humidifiers are commonly used in homes and offices to relieve the physical discomforts of a dry nose, throat, lips, and skin. The moisture they add to dry air also helps alleviate common nuisances brought on by winter heating, such as static electricity, peeling wallpaper and cracks in paint and furniture. They also offer an advantage for young children and babies and people who suffer from allergies i.e. hay fever, dust and pets.

### DO's

Do please read the Instruction Manual before using this product.

Do ensure the areas to the front, sides, rear and above this appliance are not obstructed.

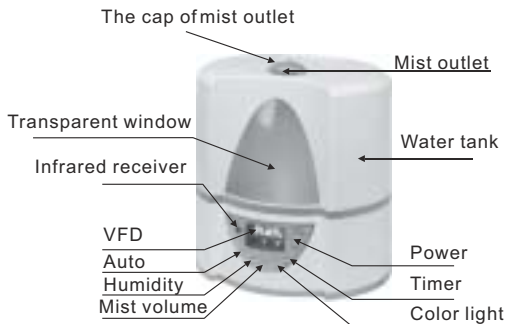

Do unplug the Humidifier when not in use.

Do be sure to unplug the humidifier from the electricity supply before any cleaning, maintenance and when re-filling water tank.

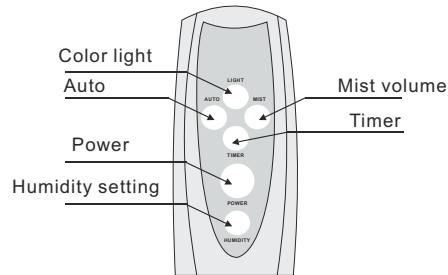

### DONT's

Do not unplug with wet hands.

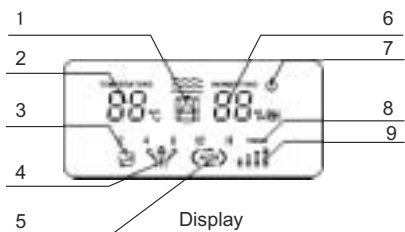

When the unit has been working, do not touch the energy exchanger, as this will be hot.

## Operating and Caring For Your New Humidifier

### Operation:

1. Place the humidifier on a level surface. Lift off the water tank, open the inlet cover, found at the base of the tank and fill with clean water (preferably filtered or distilled water). Tighten the inlet cover and place the water tank back on the base.
2. Plug in the power, the power icon will appear.
3. Press the colour light button to illuminate (pressing it again will turn the light off).
4. Press the power button, the auto icon will appear on the front display. When humidifying, the icon will flash. When the humidifying stops, the icon will stop flashing.
5. The Auto button can be switched between auto and manual. The icon will be on when auto is selected, the icon when manual is selected.
6. When in manual operation, select the humidity that you require on the humidity display. After setting the humidity, the humidity figure will flash several times, the humidity display will appear and then the unit will start to humidify. Once the set humidity is reached, the unit will stop humidifying. The humidity can only be set when manual operation is selected.
7. The mist volume button can be set to High, Medium and Low humidity speeds. When this green icon is on, the unit is set to the Low humidity setting. Pressing the humidity button will set the unit at the Medium setting (the icon will show one yellow bar), pressing the humidity button again will set the humidifier to the High setting (the icon will show one red bar).
8. To program the unit to run on the automatic timer, simply press the timer button once for two hours, twice for four hours, three times for eight hours and four times for twelve hours.
9. When the water tank is empty, the humidifier automatically stops and the "water-out" icon will appear together with an audible alarm.

### Caring For Your Ultrasonic Humidifier:

1. Only use a soft cloth to wipe the water tank surface.
2. Do not overfill the water tank.
3. Do not scour the water channel with abrasive cleaners.
4. Always empty the unit before moving to another room.
5. Keep away from direct sunlight and any heat source.

We recommend that you clean your unit internally once a week if using water straight from the tap. If there is furring in the channel or on the energy exchanger, immediate cleaning is recommended with the detergent supplied.

**IMPORTANT:** Do not use aggressive chemicals for cleaning. If you encounter a problem with the humidifier, please return the unit directly to InStyle Products Limited or the place of purchase for repair or service. Please do not attempt to repair the humidifier yourself as doing so will void the warranty and could cause damage and/or personal injury. Before storing for long periods, make sure that all the parts are clean and dry. Store the unit in a dry location.
